

GESS ChartFactory

GESS ChartFactory is an add-on for GESStabs that can be used to produce presentations automatically – parallel to tabular analysis. The result: individually designed PowerPoint charts with “real” and editable data tables.

ChartFactory is the third and final stage of our production line: from the survey with GESS Cati and GESS Q. to data preparation with GESStabs all the way to presentation with GESS ChartFactory, our software provides solutions for every step of the process.

Chart generation as an integral part of the analysis process

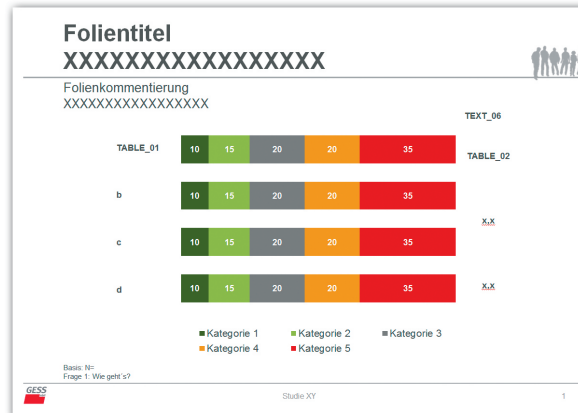

Multiple survey groups, regions and waves, last-minute changes and additions to the data and constant updates can be dealt with hassle-free thanks to the **automatic and synchronous** generation of data, tables and charts. The presentation is created parallel to the tables.

Productivity

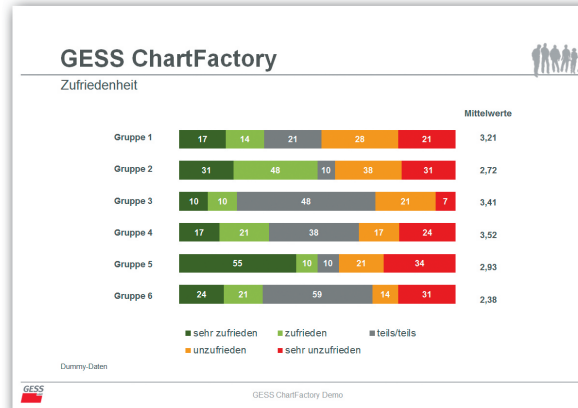

GESStabs in combination with ChartFactory delivers tabular analysis and presentation charts **in one easy step**, in one script and with one syntax language. Texts, numbers and graphics are produced consistently and correctly – it’s the final result that counts!

From template to finished chart

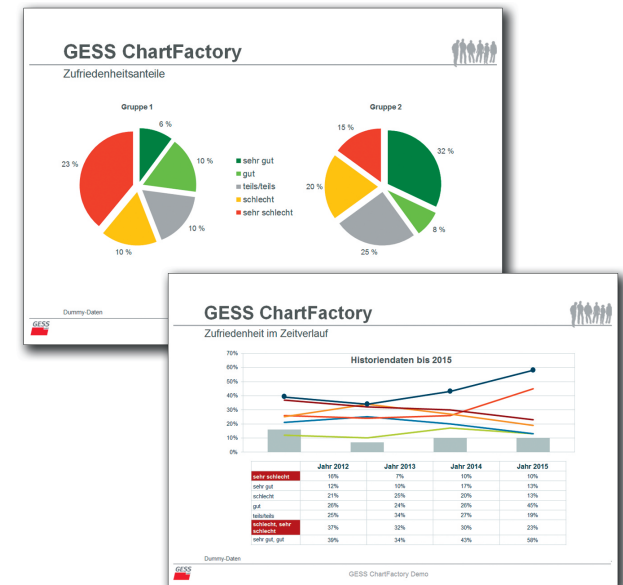

You can design your templates however you like and customise them in line with your CI or your client’s requests.

You can decide exactly which elements of your data tables you want to be transferred to the finished chart. Texts can be positioned, numbers added to diagrams, individual fields marked and diagrams or logos placed wherever you want them.

The software gives you the freedom to be as creative as you like! ChartFactory adapts your presentation template to your data, adds captions and scales diagrams.

Charts are automatically updated with modified data sources

The presentations generated can be edited, supplemented and used as templates for ongoing stages at any time: ChartFactory incorporates your manual changes and updates the charts with the latest data.

Error avoidance

You'll never have to enter numbers in presentations manually again – a great way to avoid errors!

By producing data tables and presentation charts synchronously, the software guarantees the consistency of all your results documentation. Even last-minute additions, corrections or updates can be dealt with simply and reliably – ensuring your results are **always accurate** and produced without stress.

Continuously evolving software – by us for you!

We're enhancing and developing our software all the time – in close collaboration with our clients. You tell us what's missing, we learn what the market needs – and update our software accordingly.

The main points at a glance

- GESStabs add-on for the production of PowerPoint charts
- Presentations generated from own templates
- Individual and flexible design in own CI
- Editable data tables in PowerPoint
- Tabulation and charts in one easy step
- Error avoidance and time saving thanks to automated chart production
- Synchronous updating of data tables and presentation charts
