

Installation of GESStabs

Please see our manuals for detailed information on all GESS products.

GESStabs.exe

1. Download the current GESStabs-setup.exe as 32- or 64-bit-version from our download center (<https://download2.gessgroup.de/>) and start it on your computer.
2. Follow the installation menu. Unless otherwise specified, GESStabs is installed and saved at C:\GESS\tabs.

Two possible applications of GESStabs are installed:

- A. GTX.exe & GESStabs.exe – graphical user interface
 - B. GTC.exe – command line interpreter, DOS interface
 - C. further system files, instructions and the GESStabs manual
-

SPSSIO

Dynamic Link Library-Dateien (DLL), die [IBM](#) zum Lesen, Verarbeiten und Schreiben von SPSS-Dateien bereitstellt.

3. Download the files from the folder 'SPSSIO' as 32- or 64-bit-version from our [download center](#).
 4. Save the files in your GESS\tabs-register.
-

Lizensierung

5. We provide the file 'gesstabskey.txt' with a unique primary key for licensing.
6. Save this file in your GESS\tabs-register.

To check the license, an internet connection is required at the first start of GESStabs.

After the license key has been checked by our license server, a secondary key is generated and automatically saved in a text file named 'gesstabskey.<computername>' in your GESS\tabs-register. This allows the subsequent use of GESStabs without an internet connection.

Texteditor

You can use any text editor.

We recommend Notepad ++ or TextPad. Both editors support syntax highlighting, which we provide for GESStabs.

7. Download one of the editors from <https://www.textpad.com> resp. <https://www.notepad-plus-plus.org> for free.
8. Download the syntax highlighting from [our homepage](#) and follow the provided instructions.

PostScript

GESStabs automatically generates PostScript output files. For their generation, reading and conversion (for example in PDF format) a corresponding software is necessary.

For this we recommend GhostView and GhostScript.

9. Download the software from <http://pages.cs.wisc.edu/~ghost> for free.
10. Set your path to your PostScript viewer in the GESStabs menu under 'Options'.

It is also possible to create a PDF output file without additional software (graphic restrictions).

GESS ChartFactory

GESS ChartFactory is an add-on for GESStabs.

1. Download the current Powercharts.xlsb from our [download center](#) and save it in your GESS\tabs-register.
2. You will receive a unique license key from us.
3. Open the Powercharts.xlsb, insert your license key into cell C1, save and close the file.

Your license key is checked at regular intervals by our license server. An internet connection is required.
